Subject: Revised Q&A

OK, by popular demand I've scaled back the detail here and provided a POC (lucky you Jim). This is just a simple response to help us all get on the same page. Thanks.

Q. Could something like what happened with the Animas River happen in Park City?

A. No because there are some significant differences. In Park City, the mine drainage tunnels are actively managed by Park City and the tunnels are not plugged. There are geological differences as well. Please contact Jim Blankenau at Park City for more specific information about abandoned mine features around Park City.
